Delete all empty folders?

Help & Support

---

gerritb #1 January 31, 2017, 4:24am

As a result of deleting duplicate files in some backup trees using DOpus, I now have many empty folders on my drive. I can't see how to delete all empty folders though. Tools / Find Panel / (type = folders and size = 0) doesn't do it. Can anyone help? Thanks, Gerrit

I do this all the time... you might not like my method though if you have a huge hard drive. Turn on Flat View, click the Calculate Folder Sizes button (or select from menu), then sort by size. All the empty folders sort to the top, where they can easily be deleted in one shot.
